

Enterprise Reporting

with Sentry-go v6

Self-maintaining reporting system

View Sentry-go monitored environment as a whole

One licence covers all servers

Dashboards for a global view

Built-in or IIS interface

Key features

Automatically record monitored data using SQL Server

Show overall system health

Centralised reporting

Single reports cover all monitored servers incl. alerts & status

Help spot trends

Drill down for more details

Access enhanced reports through Enterprise/ASPX

Giving you control of your enterprise!

When monitoring a server, arguably the best place to be is on the server itself. Sentry-go server monitors do just this, to minimize network cost, remove additional points of failure and the need to compromise firewall and other security. These monitors also give you access to monitored information & alerts through their dedicated web server.

However, there are times when viewing details for the entire environment can be beneficial. Doing this with Sentry-go is easy.

With Enterprise Reporting, Sentry-go monitors continue to enjoy the benefits of local operation and can be accessed in the normal way via the Console Client & desktop browser. However, their status & monitoring information can additionally be accessed centrally from combined web reports to give a single "enterprise" view.

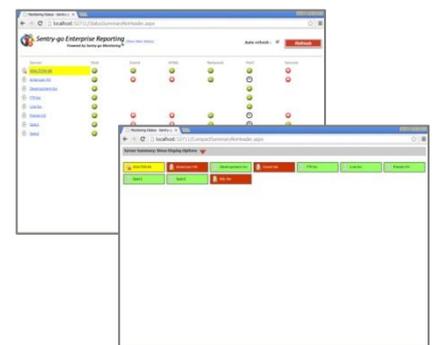

How does it work ?

Enterprise Reporting is an option available for Quick & Plus! monitors. Using a single licence, this self-maintaining system enables individual monitors to record status & monitoring information to a central SQL Server database automatically.

From here, additional enterprise-wide reports can be generated, either from the monitor's integrated web server, or using the enhanced Enterprise Reporting/ASPX site for IIS.

For example, you can ...

- View alert & status information from all monitors within a single report.
- Verify overall system health.
- Spot trends.
- Drill down to access local details.

Why not try Sentry-go for yourself, free for 21 days ? Visit <http://www.sentry-go.com/evaluations.aspx>, or contact us for more information.

Accessing Enterprise Reports

Once details have been captured, you can monitor your entire environment with ease, direct from the monitor's built-in web server.

Enterprise Reports/ASPX

If you have Microsoft IIS, you can additionally install Sentry-go Enterprise Reporting/ASPX allowing easy, external access and enhanced reporting content.
